Stretch Out

A few precautions can prevent future pain

Kelli Crosby

You brush your teeth daily because you don't want cavities or gum disease, right? Well, what do you do on a daily basis to prevent tension in your neck? Brushing your teeth offers you preventive dental care, but what if you could learn to be preventive with the rest of your body?

We all have bad daily habits we don't even notice until something starts to hurt. These bad habits are the root cause of many painful conditions. To help prevent pain, however, we can turn these bad habits into good habits that can be worked into our daily routine. Here is some general advice that can apply to almost every part of daily living.

Sit Up Straight.

Sit in a chair with your hands on your hips. Slouch. Feel how your hips roll back (if you're wearing jeans, you'll be sitting on your pockets). Now sit up straight by moving your pelvis forward and centering your weight over your pelvis and off your buttocks.

Sleep on Your Back or Side.

Sleeping on your stomach makes you twist your neck and body in order to breathe. This twisted position is terrible for your spine, especially for prolonged periods during sleep. Check your pillow and make sure it has a thickness that will support your neck in a position neutral to the rest of your spine. Try a

Everything you do can be done better from a place of relaxation.

-Stephen C. Paul

Even just a few minutes at work can help turn bad habits into good ones.

Don't Slouch.

Slouching puts strain on your neck and can give you a headache. Your head weighs roughly 10 pounds-about as much as a bowling ball. Your spine is designed to balance that bowling ball when you're in an upright posture. If you slouch, your muscles have to do more work to hold your head up, which makes your muscles tight and angry.

memory-foam contour pillow, especially if you are a side sleeper.

Bend with a Straight Spine.

Bending over with a curved back puts pressure on your disc material and strains the spine. The pressure created during incorrect bending can cause the

discs to bulge and put pressure on spinal nerves. Your back was not made to lower and raise your body—that's what your buttocks, hips, and knees are for.

Stand with your knees shoulder-width apart and pretend you are going to lift a 50-pound box off the floor. If you are bending your knees and hips and using your legs to lower and raise your body weight, you are lifting correctly. Now, use the same technique to pick your shoes up off the floor. Think about a squatting movement when you need to lean forward, too—such as while washing your face in the sink. Let your hips and knees do the work.

Take Regular Stretch Breaks.

The muscles in your arms and hands get tight when you grip or pull. The muscles in your neck and shoulders get tight when you reach forward or away from your body. Give these muscles a break with a simple stretch.

It only takes 10 seconds to lengthen the tight tissue, which will take pressure off your joints and prevent chronic conditions like tendinitis and bursitis. Watch for opportunities to work in a brief stretch.

Undo Yourself.

Evaluate the position of your body during your daily activities and make sure you "undo" that position during the day. There is no way to teach a stretch for every single activity you do, but if you take the time to reverse the position of the joint and stretch in the opposite direction, you will lengthen tight tissue and reduce repetitive strain on joints.

Tips to Save Your Body

Replacing bad habits with good ones takes time and thought, but the effort is well worth it. Here are some helpful tips to keep you on track.

-- If you keep waking up on your stomach, wear a pair of gym shorts to bed and put a golf ball in each pocket. When you roll onto your stomach, the golf balls will wake you up and you can return to your back or side.

-- When unloading the dishwasher and getting laundry out of the machine, pose

like a tennis player waiting for a serve. The knees are over your toes (but not beyond the toes), buttocks are backward, and shoulders are forward.

-- Don't try to carve out 30 minutes daily for a stretching routine. If you stretch regularly throughout the day, you will be more effective at keeping tissue loose. Remember, it only takes 10 seconds to stretch a muscle—so find those seconds during your day and make the most of them.

-- Think about stretching the same way you think about hydration. Don't wait until you're thirsty to drink water; by then you're already dehydrated. If you wait until something hurts before you stretch, you could develop chronic tension that can lead to everything from a headache to tendinitis.

A daily stretching routine will help

prevent future issues and address current ones. Don't wait until it's a problem. Start stretching today and, little by little, your body will thank you.

Kelli Crosby is the author of How to Think Like a Physical Therapist in Your Everyday Life. She graduated in 1999 from the University of North Florida and completed her specialty certification in orthopedic manipulative therapy in 2006.

Stretching for 10 seconds can take pressure off your joints and help relieve pain.

Happiness is Contagious

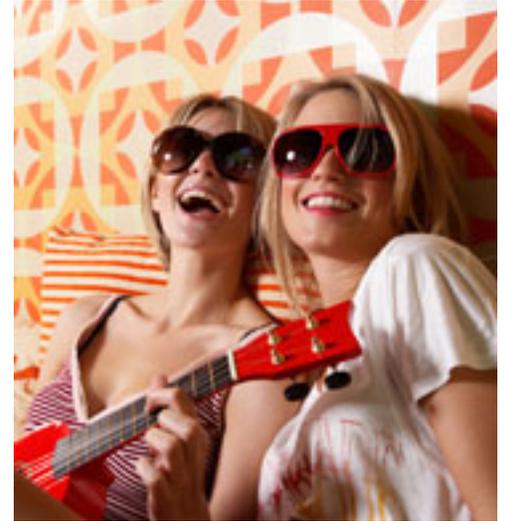

Maybe mom was right. Research suggests that surrounding yourself with friends and family who are happy can actually increase your own happiness.

Scientists at Harvard University and the University of California, San Diego, found that emotions, particularly happiness, have a viral effect in how they spread from one person to another. For every happy person in your physical social network, you have a 9 percent chance of increasing your own happiness. The effect is more pronounced the closer someone is to you geographically, and it does not seem to include electronic communications. The study, "Dynamic Spread of Happiness in a Large Social Network," can be found online in the British Medical Journal (www.bmj.com).

This is especially good news considering the potential health benefits of happiness and positivity. A study published in *Stroke* magazine has indicated a "significant association"

between optimism and a reduced risk of stroke. This is in addition to studies that have linked optimism to a healthier immune system, faster wound healing, and a lower risk of heart disease. While the exact cause of the benefits is not clear, one theory is that optimistic people are more likely to take care of their health. In addition, there is hope that teaching optimism could become part of a preventative program for various conditions.

What's one way to get happy? Try massage! Exposure to stress, a contributing factor to unhappiness, over a long period of time can increase the rate of neural degeneration and increase the risk for Alzheimer's disease. Luckily, a study from Umea University in Sweden has shown that just five minutes of massage has the potential to lower stress, and 80 minutes of massage has a tremendously positive effect on stress levels. Get massage, get happy, and cheer up your friends and family!

Surrounding yourself with happy people is healthy!

Massage for Old Injuries

Ancient Injuries Don't Have to Make You Feel Old

Art Riggs

Injuries such as chronic back pain, trick knees, and sticky shoulders are not necessarily something you just have to live with. Massage techniques might hold the key to unlocking this old pain.

Will Massage Help?

The benefits of massage will depend on the extent of the injury, how long ago it occurred, and on the skill of the therapist. Chronic and old injuries often require deeper and more precise treatments with less emphasis on general relaxation and working on the whole body. Massage works best for soft tissue injuries to muscles and tendons and is most effective in releasing adhesions and lengthening muscles that have shortened due to compensatory reactions to the injury. Tight and fibrous muscles not only hurt at the muscle or its tendon, but can also interfere with proper joint

movement and cause pain far away from the original injury.

Therapists who perform such work often have specialized names for their work--such as orthopedic massage, neuromuscular therapy, myofascial release, medical massage, etc.--but many massage therapists utilize an eclectic approach combining the best of the specialties.

It Works!

A recent *Consumer Reports* article ran the results of a survey of thousands of its readers and reported that massage was equal to chiropractic care in many areas, including back and neck pain. Massage also ranked significantly higher than some other forms of treatment, such as physical therapy or drugs.

If that nagging injury persists, consider booking a massage. Be sure to discuss the injury with your practitioner: How did you receive the injury? Have you reinjured it? And what exactly are your symptoms? Often, the body compensates in one area to protect another that has been traumatized, and this can create new problems.

Discuss the issues with your massage therapist. (Sometimes just talking about old injuries can play a significant role in the healing process.) Together, the two of you can work to determine a treatment plan.

*Those who bring
sunshine into the
lives of others,
cannot keep it
from themselves.*

-James M. Barrie

Welcome to my newsletter.

Spring is upon us. The days are getting longer and summer is on its way. I have picked out a few articles that I think you will enjoy.

I especially enjoyed the article "Massage for old injuries" by Art Riggs. I attended his deep tissue class last summer and it has greatly enhanced my deep tissue work.

I am now offering massage in Petaluma on Saturdays and Mondays from 9am-5pm and 9am-12pm Tuesday - Friday.

Call for your appointment.
