How, Exactly, Does Massage Therapy Work?

The Anatomy of Happiness

Douglas Nelson

This article is from the Winter 2012 issue of Body Sense.

As I greeted Craig in the waiting room, the radiant smile on his face told me we were making good progress on his shoulder pain.

"My shoulder is so much better," he remarked as he entered my treatment room. "I hardly think about it anymore." As a massage therapist who specializes in dealing with specific muscular issues, this is exactly what I hope to hear from the people I serve.

"I must say that the educational process has been just as valuable as the hands-on work. It has given me a greater

treatment is the effect on my mood. When I leave your office and go back to work, I seem to function much more efficiently; I get way more stuff done than usual. Mostly, I am in a much better mood, much happier, and more positive about the world. I have really enjoyed understanding how massage helped my shoulder, but now I'd like to understand how massage affects my mood."

Ready to accept the challenge, I jumped in.

"Here is one reasonable explanation based on emerging neuroscience. For many decades, the prevailing wisdom was that emotions are experienced in the

Why do you feel so good after a massage?

understanding of my own body, what to do, and maybe more importantly, what not to do. I have a better sense of what was happening to my shoulder and why. This whole process is so interesting and educational.

"I came to see you for help with my shoulder," he continued, "but one of the most striking benefits of my massage

mind and, as a result, those powerful emotions then affect our body. For example, when someone offends us, we have the emotional experience of anger. Shortly thereafter, we experience physical symptoms of anger, such as increased muscle tension, constricted breathing, and an increased heart rate.

On the other hand, powerful positive emotions like joy and happiness also have corresponding physical effects. Our emotions and thoughts have physical consequences. As it turns out, however, the new scientific understanding reveals that these mind-body experiences are at least bi-directional, if not completely the other way around."

"I'm a little lost," he said. "What do you mean by the other way around?"

"The emerging science is providing some really good evidence that the physical sensation can lead to the emotion, instead of the emotion manifesting as a physical experience."

"Wow, that seems completely backward!" he exclaimed.

"Your mind is always trying to make sense of what the body experiences. The brain needs a reason for what it experiences; we interpret meaning so we know how to respond appropriately. I am sure you can remember being really tense some morning, feeling completely out of sorts. If someone asked you why, you probably couldn't point to any specific offense as the reason. Throughout the morning, however, little things that would normally go unnoticed now really bothered you. You looked for things that were wrong to confirm that the tension you were feeling was perfectly appropriate for the terrible mood you were in. In essence, you created a viable emotional reason to explain your tense physical state."

"I assume that the reverse is also true, correct?" Craig interjected. "A better physical state should have a positive effect on emotions."

"Exactly. This might indeed explain what you experience after a massage. You leave my office with a very different physiology than when you arrived. The optimization of muscle function after massage will be experienced as efficient and effortless movement. The muscle tension in your shoulders is drastically reduced. Your breathing is slower and there is a heightened sense of awareness. Think about the emotional correlate your brain must then assign to this new stream of physical information. When do you normally feel such lack of tension, such lightness and freedom?"

"When I am extremely relaxed, happy, and contented; when the world seems like a wonderful place," he responded.

"The experience of physical ease is then interpreted by the brain as being a sign of emotional ease. Relaxation of the body is also relaxation of the mind, as evidenced by the fact that the same class of drugs (benzodiazepines) given as muscle relaxants is also used in the treatment of anxiety disorders. Furthermore, when you return to work with that emotional framework, it changes what you notice around you as well. Little annoyances don't seem as disturbing. Since attention is selective, your peaceful and positive emotional state predisposes you to notice lots of little blessings that you previously might have overlooked. This process becomes very self-reinforcing."

"I find this subject fascinating," Craig

said. "In fact, after each of our previous sessions, that evening I'd share with my wife some cool anatomy fact or principle I learned from you. I even gave each lesson a name."

"You're kidding," I said, bemused and curious. "If I might ask, what might you call this one?"

"The Anatomy of Happiness," he replied with a smile.

His clinic, seminars, and research endeavors explore the science behind this work. For more information, visit www.nmtmidwest.com, or email doug@nmtmidwest.com.

Your physical state can affect your emotional well-being.

Massage Ambiance is Key

Is the Scene Conducive to Your Relaxation?

Nina McIntosh

Ever had a massage but couldn't fully enjoy it because the music was too fast, or the aromatherapy was not to your liking, or outside noise was disruptive? Whatever the issue, feel comfortable knowing that your massage therapist wants you to express your feelings.

The quality of communication between the practitioner and the client is key. By all means, you should speak up about anything that diminishes your enjoyment of, or ability to focus on, your session, no matter whether the problem is the therapist's office or her/his behavior. It's your session, and you have the right to an environment that supports your relaxation.

Having said that, it's not always easy to assert yourself while lying naked on a table. However, your practitioner is a professional and is open to, even seeking, feedback. If you are bothered, others probably are too. Your practitioner wants and needs to know and would much prefer you mentioning

it than choosing to not come back again.

And you may learn something as well. Perhaps that lavender oil you thought was too strong actually helps relaxation and will work wonders for you in a more diluted form. Or maybe the exterior noise is a problem only on Monday evenings, and you can be sure to avoid booking your appointment then.

FIXING THE PROBLEM

The situation may be something easy to remedy, like changing the music or essential oils. But if it's something more complex, like exterior noise from officemates, your practitioner may need time to address the situation.

View the situation as an opportunity to provide important, constructive feedback about the services offered as well a chance to enhance the therapeutic relationship between you and your massage practitioner.

Your massage session is about you. Take

responsibility for communicating your needs, and your session will be all the more healing for it.

Communicating your needs is key.

Be Immune to Inactivity

The World Health Organization has called inactivity the second-leading risk factor for non-communicable diseases and the fourth-leading risk factor for global mortality.

In the United States, inactivity has helped contribute to the fact that 35.9 percent of adults age 20 years and over are obese, as well as 18 percent of adolescents and children ages 6-19.

With risk factors like high blood pressure, high cholesterol, coronary artery disease, stroke, type 2 diabetes, and more, it's important to make sure you get enough exercise and activity to stay healthy.

Here are some tips to help you keep moving.

Be Aerobic Every Day

The Centers for Disease Control (CDC) recommends getting 2.5 hours of moderate-intensity aerobic exercise each week. If you break it down, that's just over 20 minutes a day of activities like walking, water aerobics, riding a bike, or pushing a lawnmower.

Want to cut that down even further? If you bump the exercise up to vigorous intensity, you can cut the time in half. Vigorous-intensity activities include jogging or running, swimming laps, and playing basketball or tennis.

Add Muscle-Strengthening

Lifting weights, working with resistance bands, and doing body-weight resistance exercises, heavy yard work, or yoga are all considered by the CDC to be important muscle-strengthening

activities. The recommendation is to get this type of exercise at least twice a week to the point where your muscles are tired.

If you focus on setting realistic goals and getting just a bit of exercise each day, you'll be on your way to meeting the requirements in no time. Find exercises and activities that you enjoy doing, and it won't seem like such a burden. Plus, you'll feel great about reducing the risk factors associated with a sedentary lifestyle. So get a plan, get out there, and get moving!

*"Tension is who
you think you
should be.*

*Relaxation is
who you are."*

-Chinese proverb

Happy New Year and Welcome 2015!

I hope all of you had a fun Holiday!

In this month's newsletter I have chosen articles that I think will help you to get the most from your massage.

"How Exactly Does Massage Therapy Work?" Reminds me of why I love being a massage therapist. Not only do I get to help you relieve tension in your muscles, but I also see that you have come to a more peaceful and positive emotional state.

"Massage Ambiance is Key" reminds you how important your feedback and input is to you getting the best massage. So please do not hesitate to let me know if the room is too warm or cold, if the pressure is too much or too little. Whatever it may be we can make the adjustment to ensure you receive the best massage.

"Be Immune to Inactivity" explains the importance of motion. One thing I often recommend is to take a 15-20 minute walk after your massage. It will help your body to settle into the massage and allow you to be more in touch with your body.

The New Year always brings a new chance and new opportunities. Make the most of them in 2015!
