Moving Through Life

Finding the Pleasure in Exercise

Sonia Osorio

We're busier than ever with longer workdays, less leisure time, shorter lunch hours, longer commutes, and more demands than ever before. We may even be in a job that doesn't fulfill us, yet we spend most of our time there. When the day ends, we have almost no energy left to do what we enjoy. How to find a healthy balance?

Plenty has been written about the therapeutic benefits of exercise. So, why aren't more people reaping those benefits and moving toward health and well-being? We need to reexamine our notion of what exercise and movement are and consider what we're moving toward or away from. Then we can begin to ask ourselves other questions: Not

reoriented our point of view to notice where the opportunities lie? We can begin by simply redefining exercise (with its sometimes negative connotation of obligation) to movement. Already opportunities arise: How do we want to move in our bodies and in our lives? How can we have fun doing that? How can we move more (or maybe less, if we need to slow down)? How does it feel to be still? How can we make time to move into pleasure, to move with pleasure? Already, the notion of movement takes on a more healing expression. Rather than simply being another item on our to do list, it becomes a way for us to examine our lives, to see where we can move toward health, and use physical activity as a way to support this.

*Be happy for
this moment.
This moment is
your life.*

-Omar Khayyam

Pleasurable movement is motivating, connects you with your body, and comes in many forms.

just are we fit, but are we physically, emotionally, and spiritually healthy? Are we happy? Do we enjoy how we're moving through life? How can we integrate more healing movement into our days?

Exercise as "Medicine"

We sometimes see more barriers than options to exercise. But what if we

"When most people think of medicine, they visualize something material like a pill to be popped, a liquid to be swallowed, or an injection to be endured," writes Carol Krucoff, author of "Healing Moves: How to Cure, Relieve, and Prevent Common Ailments with Exercise" (Harmony Books, 2000).

"Some might also consider surgery, tests, or procedures ... [But] simple physical activity can have profound healing effects."

Krucoff, who cowrote the book with her husband, Mitchell, a Duke University cardiologist, advocates movement as preventive medicine, saying it's an ideal way to combat the increasing number of inactivity-related health conditions such as heart disease and obesity. This could actually be expanded to include stress-related conditions. In fact, it's often this combination of inactivity and increased stress that wreaks havoc on our immune system, endocrine system, and circulatory system. Every system in our body, in fact, responds to stress and inactivity. But, if this is true, then the inverse is also true: every system in our bodies will also respond to movement and pleasure. To make movement pleasurable and to use it as a way to reconnect with our bodies is, in many ways, the perfect antidote to the cycle of inactivity/hyperactivity and stress. As we move more in this way, we gain energy and health, we feel rejuvenated and relaxed, and we become more physically and emotionally aware.

Emotional Fitness

We often focus on physical fitness, but any movement toward health must also include emotional and spiritual fitness. Psychologist Nancy Mramor, PhD, author of "Spiritual Fitness" (Llewellyn Publications, 2004), ties emotional fitness with our physical health and with our heart's expression. "There is evidence that the largest number of heart attacks occurs on Monday morning between 8 and 9 a.m.," she says. "This occurrence is related to the experience called joyless striving. It applies to feelings of having to force yourself to go to a job that you have no interest in, or even truly dislike. Clearly these feelings suggest a lack of emotional fitness in the match between the employee and the job." When we're emotionally connected to our work in a healthy way and to one another, we not only survive, we thrive.

Personal Health

Interpersonal relationships, in fact, are one of the three major causes of life stress, along with environmental events/conditions and personal attitudes and beliefs. In his book, "Love and

Survival" (Harper Collins, 1998), renowned physician Dean Ornish, who first proved that heart disease was reversible through lifestyle changes, says that in order to survive, we need not only care for our lives, but the lives of others. Individuals with supportive relationships get sick less, heal faster, and live longer.

Our health and well-being are not about being hyper-active or inactive. They're about finding a balance, making our actions conscious, and learning to move in ways that are both healthy and appropriate in our own lives, then moving this healing energy out toward others. So, rather than exhausting or limiting our energy, we learn to expand it. Then we can begin exercising in a whole new way--exercising our right to choose and to better understand our body, our life, and what we want to be doing with it.

Begin by checking in with yourself as you're moving through your day: How does your body feel right now? How are you breathing? Where is this movement taking you? Do you feel good? Are you satisfied? Are you happy? If not, then change something. Change how you're moving, where you're moving toward, or look at what you're moving away from.

"Become the change you seek in the world," Mahatma Ghandi said. This isn't about a temporary quick fix to end a bad habit, lose some weight, or fill our time. This is about long-term change--making more conscious use of our time and of our life. It's about moving through life in healthy and healing ways, and expanding our idea of who we can be. Then our view of the world widens, our heart grows, our spirit soars, and our body moves toward true change. This is the healing power of movement.

Enjoyable exercise boosts physical health as well as emotional well being.

Relief for Computer Users

Mary Betts Sinclair

According to the American Optometric Association, 46 percent of Americans spend at least five hours a day on a computer or smartphone. When looking at a screen, many people hold their head forward of center and slouch, which puts many upper-body muscles in a shortened position.

HERE ARE SOME WAYS TO AVOID PAIN AND STRAIN:

Computer users tend to blink very little and stare straight ahead, not using their peripheral vision. Be sure to keep blinking, which washes your eyes in naturally therapeutic tears and breaks up your stare.

Take frequent rest breaks using the 20-20 Rule: every 20 minutes, spend 20 seconds looking at something far away, preferably gazing out a window. Also, stand up and move as much as possible. This is a great time to do eye-muscle stretches and range-of-motion exercises for your back and neck. Use your fingertips to gently

massage around your eyes, temples, and forehead. Finally, rub your palms together and gently cup your closed eyes. Relax and breathe freely.

Make sure you have good light, and check that your monitor is the correct distance away from your eyes and at the right height. Also, adjust the screen settings to where they are comfortable in terms of resolution and flicker.

If you wear eyeglasses, have them checked. For example, in order for some people to see clearly with their heads held in an upright and balanced position, and without chronic tightness in the back of the neck, they may need to have a prescription for a longer focal length or larger bifocal inserts, or have an adjustment of their eyeglass frames if they are bent or twisted. Some people may need a stronger or weaker prescription. If your doctor has prescribed a pair of glasses specifically for seeing the computer screen, wear them.

Mary Betts Sinclair is an Oregon-based educator and bodyworker. Learn more about her at www.marybettsinclair.com.

Take frequent breaks to avoid eye strain.

Hot or Cold for Injuries?

How to Know Which is Best for You

Art Riggs

We all know that treating an injury immediately after it happens can help minimize the pain and damage as well as facilitate recovery. But after rolling your ankle in a soccer game, or hurting your back when lifting your toddler, or tweaking your knee when stepping out of your car, what's best? Should you ice it to try to control inflammation, or would heat be better to promote circulation?

While it's difficult to establish a fail-safe rule for when to apply ice or heat, the general directive is to use ice for the first forty-eight to seventy-two hours after an acute injury and then switch to heat.

It Depends

The reality is that many conditions are not necessarily the result of a specific injury. I call these conditions "recurrent acute" and find them by far the most

common: sciatica that occurs when you drive a car; a back that flares up every time you garden; or tennis elbow from intense computer work. In these cases, consistent and frequent applications of ice may prove very helpful over long periods of time, particularly immediately after experiencing the event that causes problems.

Conversely, back or other muscle spasms caused by overexertion rather than injury may benefit greatly from heat immediately upon the onset of symptoms or immediately after exercise in order to relax the muscles and increase circulation. Also, muscle belly pain not resulting from acute and serious trauma generally responds well to heat, which can break the spasms and release the strain. On the other hand, nerve and tendon pain--regardless of

the duration of symptoms, even if you've been experiencing them for months--benefit from ice.

What Works for You

The bottom line: different individuals will constitutionally vary greatly in their reactions. Some people are more prone to the types of inflammation exacerbated by heat, while others find their bodies contracting and tightening at the mere mention of ice. Try each option and pay close attention to how your body and mind respond, and let your gut be your guide. Ultimately, what works best for you is, well, what's best for you.

Happy August Everyone!

This summer is just flying by. The kids will be back in school before you know it. This month's newsletter offers some tips on staying healthy in our busy lives.

"Moving Through Life: Finding Pleasure in Exercise" looks at how we move in our lives and how we can enjoy it more.

"Relief for Computer Users" has some great tips on how to avoid pain and strain from this high tech world we live in.

"Hot and Cold for Injuries" covers a question I often get from clients. This article clarifies when ice or heat is best for each situation.

Have a fun rest of summer! I look forward to seeing you soon.

Be Well,
Joe
